

10/100/1000Mbps PCI Gigabit Ethernet Adapter

- **64-bit Model: 64/32-bit, 66/33MHz PCI**
- **32-bit Model: 32-bit, 66/33MHz PCI**

User's Manual

This equipment has been tested and found to comply with the limits of a Class B computing devices, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

If you suspect this product is causing interference, turn your computer on and off while your radio or TV is showing interference. If the interference disappears then when you turn the computer off and reappears then you turn the computer on, something in the computer is causing interference.

You can try to correct the interference by one or more of the following measures :

1. Reorient/Relocate the receiving antenna.
2. Increase the separation between the equipment and receiver.
3. Connect the equipment into an outlet on a circuit difference from that to which the receiver is connected.
4. Ensure that all expansion slots (on the back or side of the computer) are covered. Also ensure that all metal retaining brackets are tightly attached to the computer.

Thank you for purchasing our Gigabit Ethernet Adapter. This guide is to provide the installation and usage of this adapter for network installers and users. The Gigabit network adapter complies to 64-/32-bit (for 64-bit model) or 32-bit (for 32-bit model) PCI specification and supports half-/full- duplex feature which can double network speed.

This adapter supports 1000Mbps(Gigabit), 100Mbps and 10Mbps network speed, 1000BaseT operates on all four pairs of category 5 UTP cable, 100BaseTX operates on two pairs of category 5 UTP cable and 10BaseT operates on Category 3, 4 or 5 UTP cable.

With the Auto-Negotiation technology, network speed is auto detected. When you connect the adapter to Gigabit Switch or another Gigabit NIC, the speed will be doubled to 2000Mbps (1000Mbps Transmit and 1000Mbps Receive). If you connect the adapter to 100BaseTX hub, the network speed is 100Mbps. Similarly, if the hub is a switching hub which supports full duplex function, then the speed will be doubled to 200Mbps.

This adapter supplies many drivers including Microsoft Windows 98SE, Me, NT, 2000, XP, Netware Server 5.x/6.x, Netware ODI for DOS, Linux, Unix and MAC. Whatever your requirements are ease of installation, superior performance or responsive support backed up by unlimited technical support, this adapter is the superior choice.

(1) Features & Benefits

- Supports 64/32-bit (for 64-bit model) or 32-bit (for 32-bit model), 66/33MHz PCI Local Bus Master Version 2.2/2.1.
- Comply with the IEEE 802.3, IEEE 802.3u, IEEE 802.3ab, IEEE 802.3x.
- Supports IEEE 802.3x full duplex flow control.
- Supports IEEE 802.1Q VLAN tagging.
- Supports Wake On LAN power management function.
- Plug and Play installation, auto-setup IRQ and I/O address.
- Auto-Negotiation, full/half- duplex.

- Topology : Star
- Connector : RJ-45
- Standard : IEEE 802.3 10BaseT
IEEE 802.3u 100BaseTX
IEEE 802.3ab 1000BaseT
- Transmission Rate : 10Mbps/20Mbps
100Mbps/200Mbps
1000Mbps/2000Mbps
- Hardware Required : IBM compatible PC with
available PCI slot
(PCI 2.2/2.1), 64-/32-bit,
66/33MHz
- IRQ Line : Assigned by system
- I/O Address : Assigned by system
- Drivers : Windows 98SE/Me/NT/2000/XP,
Netware Server 5.x/6.x,
Netware ODI for DOS,
Linux, Unix
MAC
- LEDs : Speed, Link/Activity (for 64-bit
Model)
Link/Activity (for 32-bit Model)
- Dimension : 163 x 45 mm (for 64-bit Model)
120 x 45 mm (for 32-bit Model)
- Temperature : 32-131°F (0-55° C)
- Humidity : 10% to 95% (Non-condensing)
- Certification : FCC Class B, CE Mark, C-tick

(1) Hardware Installation

To insert the network adapter into your PC, follow the steps as below :

1. Turn off the computer and remove its cover.
2. Insert the adapter into a PCI slot.
3. Secure this adapter to the rear of the computer chassis and put back the computer cover.
4. Connect the adapter to the network using twisted-pair cable.

(2) Driver Installation

Use the drivers supplied by the diskette included in this product. For detail description, please execute the readme.exe in the root directory of the diskette provided by this product.

If you experience any problems with the adapter, please make sure the appropriate driver is loaded, the proper cable is connected to the adapter port and the hub/switch complies with the adapter specification, such as 10Mbps 10BaseT, 100Mbps 100BaseTX and 1000Mbps 1000BaseT, then check the LED.

The adapter provides LEDs to indicate network status.

■ Speed

The LED indicates the adapter is connected to 10BaseT, 100BaseTX, or 1000BaseT network. When the light is OFF, it indicates that the adapter is connected to 10BaseT network. When the light is ON in amber color, it indicates that the adapter is connected to 100BaseTX network. When the light is ON in green color, it indicates that the adapter is connected to 1000BaseT network.

■ Link/Activity

The LED indicates if the UTP has been LINK ok or not. When the light is OFF, it indicates that the UTP port has not been connected or LINK not ok. When the light is ON, it indicates that the UTP port LINK ok. When the light is BLINKING, it indicates that there is traffic flow on the network which the adapter is connected to.
